

## **TOP 50 TRENCHLESS DESIGN FIRMS**

31 January 2011

Each year, Trenchless Technology Magazine surveys North American firms involved in the trenchless field for its annual **Top 50 Trenchless Design Firms** showcase. Survey participants are asked to include their firm's overall billings and trenchless billings for the previous year, provide the number of trenchless professionals, trenchless methods used, and the total number of projects the firm has completed in the past five years.

Our trenchless technology group is proud to announce that ***Dillon has been named to this prestigious roster of design firms for 2010; for the third consecutive year.*** We're pleased to have moved up seven places from 2009. Our group now totals 32 members who sit in five different practices and 11 offices. Over the last three years, their efforts have helped to grow Dillon's trenchless design fees from \$1M in 2008 to \$1.76M today through the support of sector leaders, practice leaders and client relationship managers. To promote the Dillon brand in the trenchless industry, our members have presented five papers at conferences across the country and in the US in the last year alone. More are planned for 2011.

Our clients are demanding that their consultants bring forward innovative and cost-effective infrastructure renewal technologies to help them tackle their mounting infrastructure challenges. Whether it's the relining of an old sewer, the in-place rehabilitation of underground structures or simply installing new underground services using trenchless construction to reduce social and environmental impacts, trenchless solutions have finally arrived on the "green" technology stage.

If you want to know more about how trenchless technology can benefit you or your clients' projects, contact ***Darcy Harris, Doug Onishi, Shane Cooper, Craig Pass*** or ***Jim Breschuk***.
