

Waste Management Planning for Residential and Commercial Developments

DILLON
CONSULTING

Dillon understands the unique challenges developers and architects may face when dealing with waste management options for new residential and commercial developments.

Our waste management planning solutions support development application processes, meet regulatory requirements and support efficient operations post-occupancy. We offer comprehensive waste management planning services tailored to meet your specific needs:

Initial Assessment

- Review of site plans and identification of waste management requirements unique to the development.
- Alignment with regional and municipal waste requirements and guidelines.

Consultation and Coordination

- Meetings with project parties to discuss design revisions and traffic flow considerations.
- Coordination with traffic consultants to confirm adequate accessibility for waste collection vehicles.
- Recommendations on waste sorting systems, storage infrastructure and collection methods.

Design Review and Recommendations

- Collaborative review of proposed waste management infrastructure.
- Suggestions for design improvements based on industry standards and local regulations.

Report Preparation

- Preparation of a comprehensive waste management report accompanying the final site plan.
